DONE Parser Transition Report

1. Introduction

This document compares parser A (BEFORE) with parser C (AFTER) for DONE sentences. It contains every improvement, regression, and persistent structural case recorded in the transition TSV. Improvement and regression sections show both parser trees; the persistent section shows the gold reference together with both parser trees. All trees are provided in LISP and graphical formats for human inspection.

DONE improvements: 5.
DONE regressions: 9.

2. DONE improvements
